

FEATURE SHEET

DEKRA SAFETY PLATFORM Construction Site Safety Solution

Just as partnering with the most competent engineers and builders contributes to your project's success, finding the right safety expert helps you to fulfil your own goals by keeping people safe and healthy and your timeline intact. DEKRA safety experts know their way around a construction site and specialize in on-site consulting to support you with your construction safety management. The DEKRA Safety Platform for Construction Site Safety helps project owners, project management companies, general contractors, and construction companies to achieve safety-related performance goals through managing and influencing activities, behaviors and exposure.

How to Benefit from the DEKRA Safety Platform?

- > Safer projects
- > Increased efficiency
- > Lean processes & workflows
- > Systematically collecting, aggregating and managing data
- > Fully configurable & customizable
- > Real-time overview, insights and trends
- > Lean, easy-to-use and convenient
- > Cross-function collaboration

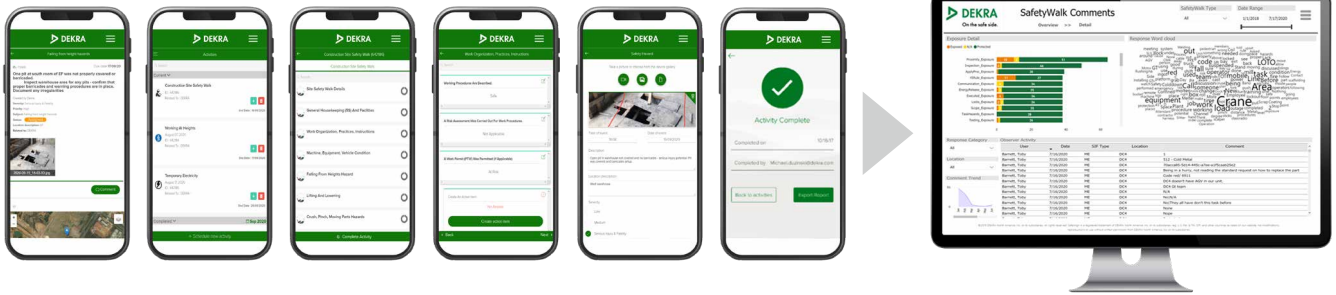

Our cloud-based mobile and web application allows you to run safer construction site projects by taking proactive measures to drive onsite safety, lower costs, and improve efficiency. Create integrated safety networks that

streamline safety operations across your company, across sites, and even across equipment to break down communication barriers and minimize hazards. Collect real-time operational data from structured and unstructured sources to identify

patterns of risk and prevent incidents and accidents. Data is available immediately and can be shared with all project stakeholders for smarter communication and real-time decision making.

A powerful tool set to enable a safer work environment

DEKRA Safety Platform for Construction Site Safety empowers all members of the organization to work collectively to enhance safety, quality, and environmental work environments. Users receive detailed guidance in their day-to-day work activities and have the opportunity to communicate any topic within their organization. To managers and experts, it offers insights, trends and hotspot analyses that help to focus limited resources to those action areas for maximum impact.

Detailed guidance in daily work

Worksheets and checklists for onsite workers to schedule and report activities such as Safety Walks or Tool Box Talks. A dashboard shows planned activities vs. those actually completed. “My Action Items” are marked completed when finished and includes relevant comments in the mobile or web app. The system tracks changes and comments.

Lean processes. Higher quality.

Workflows and action item management allow users to keep up to date with responsibilities and reports in a mobile, easy and convenient way. Integrated system manages workflows, action items, safety reports, documents, targets, relevant background information, geo-location, IoT device connectivity and more.

Overview. Insights. Analysis.

Gain access to insights, trends and hotspot analyses to focus limited resources to action areas of maximum impact. Insight into what is and is not running in a project. Identify concerns and exposures and see patterns. Look at incident and near miss information and create insights to ensure that it won't happen again.

DEKRA Safety Platform Features

Technology

- > Cloud based SaaS platform
- > Desktop & mobile application
- > Powered by GOARC technology
- > GDPR compliant and ISO 27001 certified
- > Regional data hosting

Workflows & Action Management

- > Standardized processes & workflows
- > Action item and activity management and tracking
- > Multi-lingual, personalization features
- > IoT, Smart PPE connectivity & process integration

Analytics & Reporting

- > Predictive & prescriptive analytics
- > Real-time information & reports
- > Targets, KPIs, dashboards
- > Incident / near miss reporting & risk mapping
- > Open APIs for custom integration
